How to increase partition size in Windows 2008 Server without formatting or deleting?

All the size of the hard disk partitions are carefully allocated while building the 2008 Server. However, things are changing and the scheduled size may not always meet your needs, especially for the System partition, you'll be amazed at how quickly applications, Windows updates install, browser caches, and temporary files can eat up your free space and clutter your system.

Fortunately, nowadays you can *increase Server 2008 partition size without deleting or formatting*. With [Partition Magic Server](#) software, you can split, merge partitions, shrink and extend existing system or data partition without losing data.

Which tool to increase Server 2008 partition size?

[Partition Assistant Server](#) is an ALL-IN-ONE server disk management toolkit for Windows Server 2000, 2003, 2008 and Windows XP, Vista, 7 (32 and 64 bit).

It performs basic and advanced hard disk partition maintenance. This flawless hard disk management functions are brought together: [Partition Manager](#), [Disk & Partition Copy](#) and [Extend Partition Wizard](#). It allows user to Resize, Merge, Split, Extend system and data partition. Create, Delete, Format partition, etc.

Benefits for Windows Server users

- ✓ All-in-one Partition Solution - All your partition and disk maintenance requirements can be fulfilled.
- ✓ Enhanced Data Protecting - No Data Loss
- ✓ Hot Resize - Extend NTFS system partition without rebooting
- ✓ Easy to use & user-friendly interface
- ✓ Trustworthy, many Fortune 500 companies select it to maintain their Servers.

How to increase Windows 2008 Server partition size?

To increase Windows 2008 Server partition size, you just need to shrink an existing data partition to get some free (Unallocated) space, and then you can easily increase the system partition size, no need to delete or reformat partitions.

- All operations you do will be listed in "Operation Pending" column for you to preview before applying to hard disk.

- If your Windows 2008 Server system partition is NTFS, you can increase its partition size under Windows without rebooting.

Steps to increase Server 2008 partition size without deleting or reformatting

Step 1, Launch [Partition Magic Server](#), you'll see all disks and partitions that connected to your Server and free space, used space and other properties of each partition.

Right-click the data partition and select "Resize", in the pop-up window, drag the left border rightwards to shrink it.

Clients Worldwide

There will be some Unallocated space behind the system partition.

Step 2, Right-click C drive and select "Resize", in the pop-up window, drag the right border rightwards to hold the Unallocated space.

Click "Apply" to proceed, done. After several minutes, you'll have a "new" Server that can be used for a long time again.

How to allocate free space from any data partition and add to C drive?

For enterprise users, [Unlimited Edition](#) allows unlimited usage within your company to save time and money.
