How to increase disk space of C drive on Windows Server 2003/2008 fast and easily?

Today's hard drives feature jaw-dropping amounts of space, but no matter how big your drive, you'll be amazed at how quickly application/Windows update, browser caches, restore points and temporary files can eat up your free space.

If the system C drive runs out of space, Windows pops up an warning to alert computer users when their hard drive is running low on available disk space.

Windows 2003 Server/XP low disk space

Windows 2008 Server low disk space

When Windows pop up this alert, you should fix this low disk space problem as fast as possible, as you cannot install Windows updates and other applications, system runs much slower, the worst is system crash if extremely low free space is left.

Increase disk space of C drive

To solve this problem, many people try to free up and increase the free disk space of C drive.

Different with Home PC, it is not the best idea to solve C drive low disk space problem by freeing up disk space on Windows Server when the warning pops up, because it costs a long time, and has potential risk of losing data.

The most time-saving and easiest way is increasing the disk space of C drive.

As all disk partitions has been allocated when building the Server, is it possible to increase disk space of C drive without losing data? Yes, new computer technology make the desire a reality.

How to increase disk space of C drive

It is very easy to increase disk space of C drive or any other physical or RAID virtual partitions with the NO.1 rated [Partition Magic Server](#) software. You just need to shrink an existing data partition to get some free (Unallocated) space, and then you can easily increase the system or another data partition size, no deed to delete or reformat. It also works very fast.

Ensure data safety when changing partition size

The data security is most important for Windows Server, before changing existing partition size, you should select a reliable partition software, as no one wants to see boot failure or data loss after increasing partition size.

Based on the built-in enhanced data protection technology, [Partition Magic Server](#) is not only reliable itself, but also integrated with the [Disk & Partition Copy Wizard](#) to ensure data security. It is highly recommended by many professionals and editors, besides, many Fortune 500 companies, Governments, Universities select it to maintain their Servers.

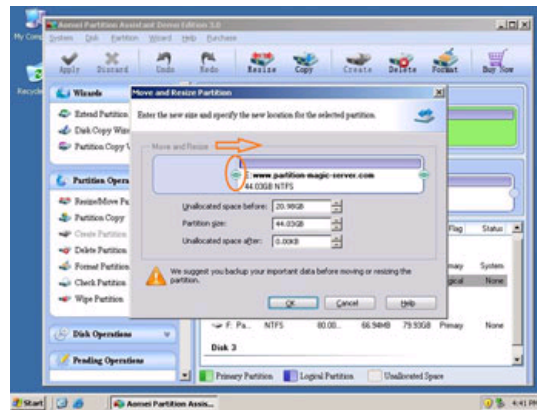

How to resize partition to increase disk space of C drive

Step 1, Launch [Partition Magic Server](#), you'll see all disks and partitions that connected to your Server and free space, used space and other properties of each partition.

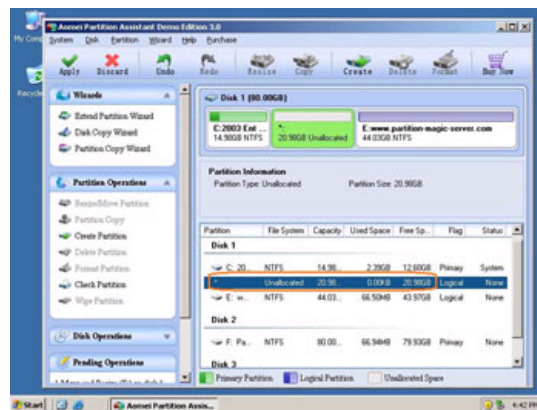

Right-click the data partition and select "Resize", in the pop-up window, drag the left border rightwards to shrink it.

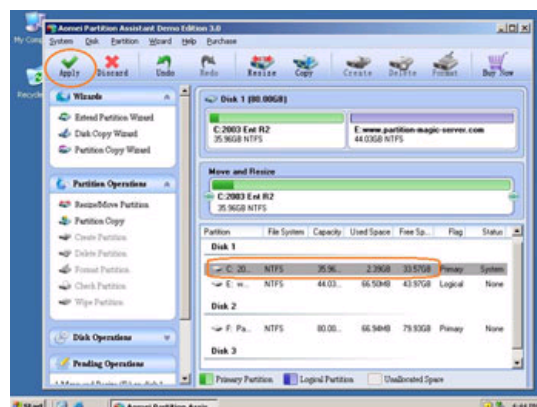

There will be some Unallocated space behind the system partition.

Step 2, Right-click the system partition and select "Resize", in the pop-up window, drag the right border rightwards to hold the Unallocated space.

Click "Apply" to proceed, done.

Now you have a "new" Server that can be used for a long time again.

How to allocate free space from any data partition and add to C drive?

Benefits to resize Windows 2008 partition with this Partition Magic Server

- ✔ All-in-one Partition Solution - All your partition and disk maintenance requirements can be fulfilled.
- ✔ Enhanced Data Protecting - No Data Loss
- ✔ Hot Resize - Extend NTFS system partition without rebooting
- ✔ Easy to use & user-friendly interface & working fast
- ✔ Trustworthy, many Fortune 500 companies select it to maintain their Servers
